TS-EAS - EAC-CPF team

Place: Virtual meeting, Zoom

Date: Friday, 15 October 2021, 7am Boston / 1pm Berlin / 10pm Melbourne

Participants: Anna-Maria, Ailie, Karin, Kerstin, Marie, Silke

Notes: Silke

Minutes

1) EAC-CPF team info

Wim left the TS-EAS due to personal reasons, see Karins email from September 22.

We welcome Anna-Maria, who is replacing Gerhard as an ex-officio member to maintain the homepage and who is currently working on examples.

We are going to change our meeting days from 1st Friday per month to 1st Thursday per month, same time: 7-8am Boston / 1pm Berlin / 9-11pm Melbourne

We got a request from our Outreach team to provide a webinar about EAC-CPF 2.0 beginning 2022. All team members think about this option.

2) Feedback on Call for Comments

- [<relationType> #219](#)

  We agreed to provide content proposals for <relationType> in a conversion from EAC-CPF 2010 to EAC-CPF 2.0. The current values for the attributes @cpfRelationType, @resourceRelationType, @functionRelationType will be transferred to according RiC-Relation terms, incl. RiC-O URI. In case there is no appropriate RiC-Relation, we are going to copy the current term (value).

  Silke is going to prepare a proposal for this mapping and will share the result with the EAC-CPF team for comments. The result will be forwarded to the Schema team.

- [<objectXMLWrap> #112](#)

  In general, we agreed on this issue but pending questions for examples and explanations.

  Ailie is going to add a description for no-namespace XML code.

  Mark already agreed to work on the topic [Include XML code](#) for the BPG. He will be asked to create an example for no-namespace XML code, that Ailie can take over.

- [@contactLineType #194](#)

  Agreement to add the new attribute value "directions".

  As @contactLineType is an optional attribute, there will be no value "other". The Tag Library explains that other values are supposed to appear in @localType.

  Silke is going to check all optional attributes with fixed values to be treated the same way.

3) Best Practice Guide

The BPG is growing and we have some more time to finalise the text and examples. The available text will be a good starting point for BPG transfer to GitHub.

Karin is going to explain @localType attribute usage in the BPG.

4) No other business

5) Next meeting

- Thursday, 4 November 2021, 7am Boston/1pm Berlin/11pm Melbourne
